RetailFix

RETAILFIX NEARBY

Alerts

Get alerts from the shops you like, and choose which ones come to this browser and which by email.

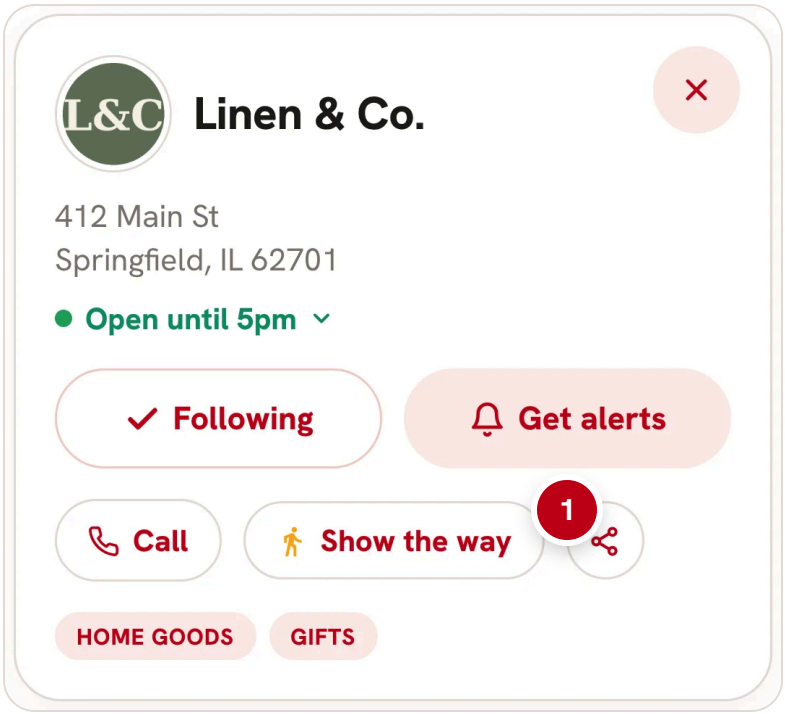

In this guide

1. Get alerts from a shop
2. Alerts on
3. Choose your alerts
4. Your shops

1 Get alerts from a shop

Open a shop and tap **Get alerts** 1. You need to be signed in. The first time, your browser asks to show notifications: allow it to get alerts on this device.

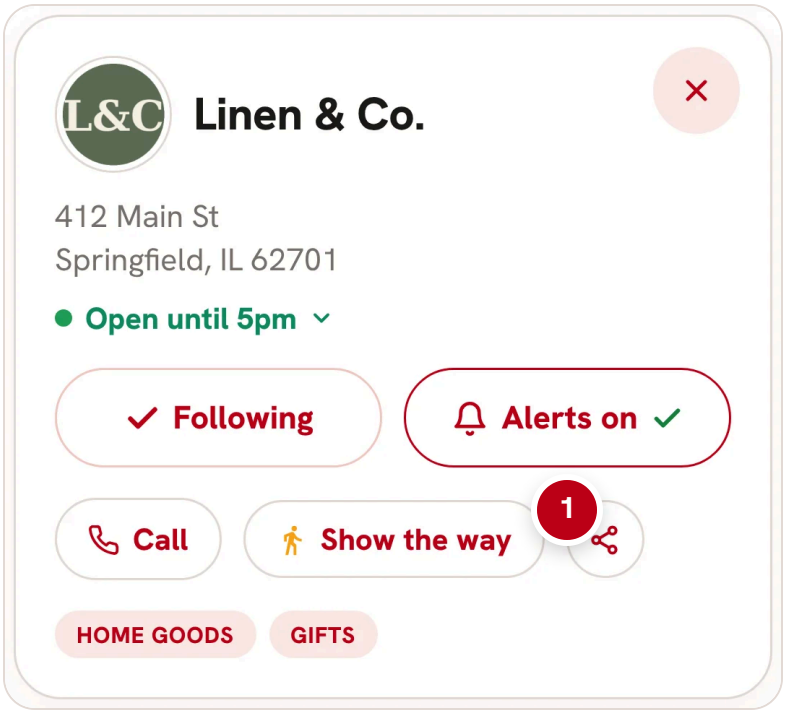

Alerts also come by email. If your browser can't show notifications, or you didn't allow them, a message says **Alerts on, by email.**

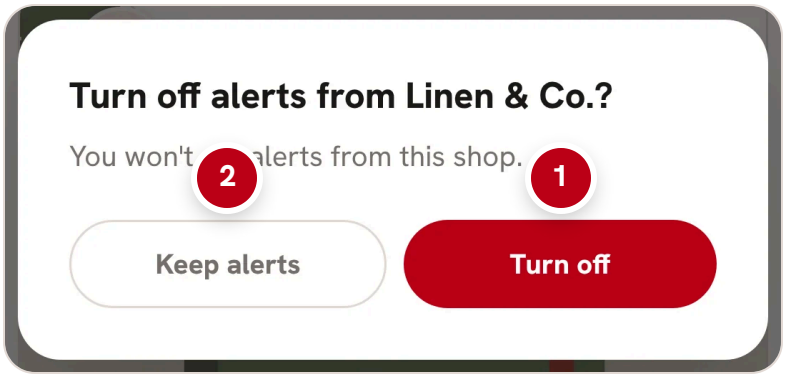

2 Alerts on

The button changes to **Alerts on** 1.

Tap it again to stop them. It asks first: **Turn off** 1 or **Keep alerts** 2.

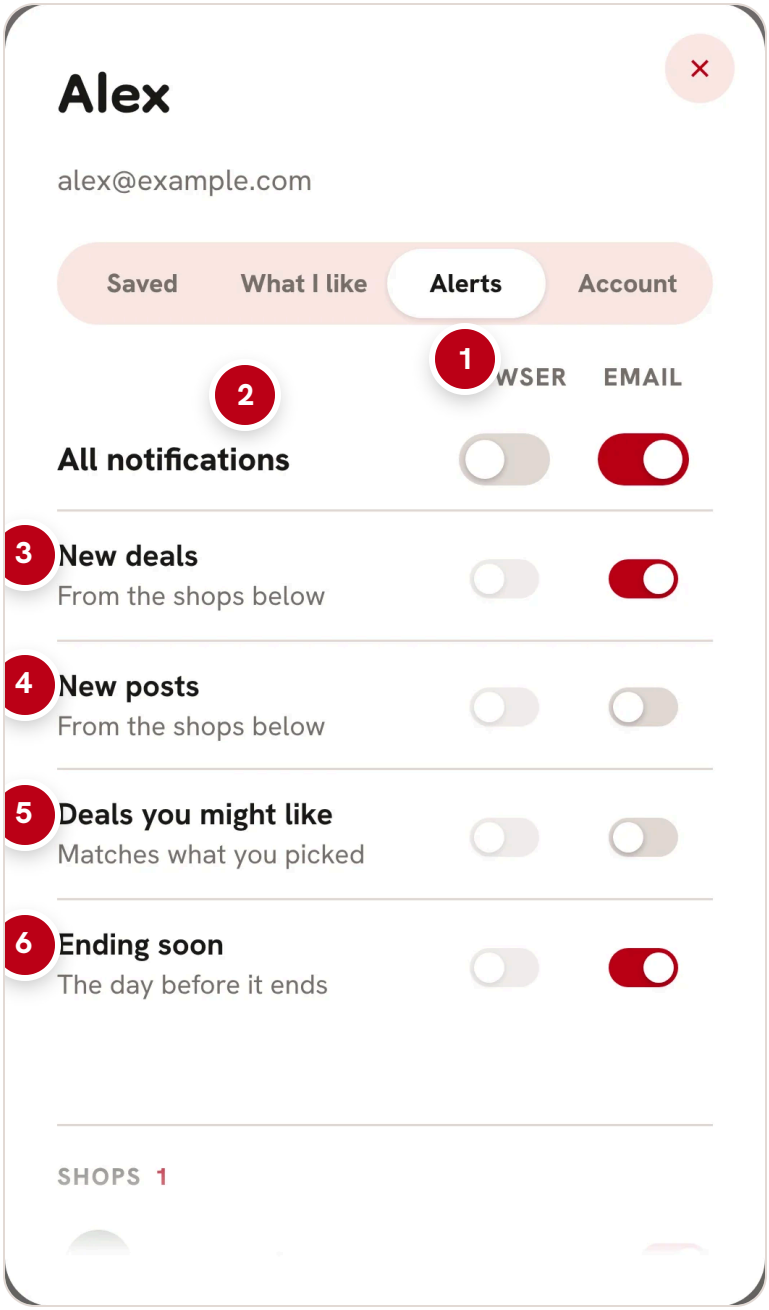

3 Choose your alerts

Tap **Account** at the top, then **Alerts** 1. Each alert has a switch for this browser and one for email.

- **All notifications** 2 turns a whole column on or off. With it off, the switches under it are grayed out, and keep their settings for when you turn it back on.
- **New deals** 3 and **New posts** 4, from the shops you get alerts from.
- **Deals you might like** 5, matching what you picked in What I like.
- **Ending soon** 6, the day before a perk you revealed, or a deal you saved, ends.

In the RetailFix Nearby phone app, **Near a shop** tells you when you're about 3 blocks from a shop you get alerts from.
